#### ACKNOWLEDGEMENTS

I owe a large debt to my field crew whose combination of dedication and general rowdiness made the excavations a pleasurable experience. Thanks to Mark Blaker, Rodney Brindamour, Sophie Clark, David Hutchcroft, Brian Spurling, Geoffry Spurling and Colin Yerbury. Janet Mills, Chris Oliver and Diane Vandermay catalogued the artifacts and Birute Galdikas-Brindamour did the preliminary sorting of the faunal material.

Assistance in the preparation of the photographic plates was provided by David Hutchcroft and Michelle Turner. A special thanks must go to Jean Williams who undertook the faunal analysis and prepared a manuscript and to Joyce May who drafted the site map. Additional funding from the Department of Archaeology, Simon Fraser University allowed for a continuation of excavations at the site in the fall of 1971. A President's Research Committee Grant to R.L. Carlson and P.M. Hobler funded the processing of

three radiometric assays.

H.L. Alexander initiated the negotiations which allowed us to work at Belcarra. As well, he guided the field work and provided feedback and encouragement (in his inimitable fashion) when it was needed the most. Philip M. Hobler provided advice on a number of questions both large and small.

A special acknowledgement to my thesis supervisor, R.L. Carlson, is in order. While guiding me through the intricacies of Coast Salish prehistory, he gave freely of both his time and knowledge and showed a patience which I had previously considered to be beyond the level of human endurance.

I thank my wife, Alana, who provided constant encouragement and support and enabled me to complete the task at hand.
