

ACKNOWLEDGEMENTS

This monograph is based on a thesis submitted in partial fulfillment of the requirements for a Master of Arts degree in Archaeology at Simon Fraser University (Rousseau 1989). A few minor editorial changes have been made for this volume. I would like to extend my gratitude and sincere thanks to Dr. Brian Hayden (senior thesis supervisor) Dr. Knut Fladmark (second supervisor), and Dr. David Pokotylo (external examiner, University of British Columbia) for their guidance and useful comments during the preparation of this monograph.

Gratitude and thanks are also extended to the Museum of Archaeology and Ethnology at S.F.U., the Museum of Anthropology at U.B.C., the Anthropological Collections section of the Royal British Columbia Museum, and the Secwepemc Museum for loaning the remainder of the prehistoric key-shaped formed unifaces examined in this study.

For their time and valuable comments, I would also like to thank the many researchers who responded to my query regarding the currently known spatial and temporal distribution of key-shaped formed unifaces in the Northwest. These persons include Robert Ackerman (Washington State University), Margaret Bertulli (Prince of Wales Northern Heritage Center), Roy Carlson (S.F.U.), Raymond LeBlanc (University of Alberta), James Helmer (University of Calgary), Robert McGhee (Archaeological Survey of Canada), David Morrison (Archaeological Survey of Canada), Milton Wright (Archaeological Survey of Alberta), David Chance (University of Idaho), Robert Greengo (University of Washington), Leslie Davis (Montana State University), and John Brumley (Ethos Consultants Ltd., Alberta).

Many of my friends and/or colleagues assisted me by obliging to witness my interpretations of visual data during the residue analysis, by participating in the experimental component of the study, and/or by providing comments on various aspects of this problem. They include Dr. Paul Bakan (Psych), John Breffitt, Luke Dalabonna, Dr. Jon Driver (Arc), Rob Gargett, Geordie Howe, Gyles Iannone, Dr. Geof Lister (Biol), Ian Kuijt, Chris Knusel, Peter Merchant, Laurie Milne, Bob Muir, Dr. Erle Nelson (Arc), Murielle Nagy, Dr. Jack Nance (Arc), Tom Richards, and Dr. Arnoud Stryd (Arcas Associates). Mrs. Ruby Gay and Mr. Cliff Smith provided some of the lithic raw materials used in this study, and I am grateful for their generosity.

I thank my parents, Paul and Chris Rousseau, and Eunice's parents, George and Nancy Murakami, for all their moral and financial support over the years. It would have been very difficult to undertake this study if they had not helped us out. Lastly, I would like to thank Eunice for putting up with me while I conducted this research. For her understanding, support, patience, and love I am eternally indebted.

Mike K. Rousseau
