

Acknowledgements

Many people and institutions are responsible for the successful completion of this book. The bulk of the work was completed in England. I wish especially to thank Andrew K.G. Jones of the Environmental Archaeology Unit, University of York, for his generous loan of Atlantic fish skeletons and assessment of preliminary drawings; and A.E. Friday and Ray Symonds of the Museum of Zoology, University of Cambridge for the use of articulated specimens for identification. I would also like to thank the Department of Archaeology, Zooarchaeology Laboratory, University of Cambridge and Richard Millner, Ministry of Agriculture, Fisheries and Food, Directorate of Fisheries Research, Fisheries Laboratory, Lowestoft, for their assistance in acquiring species necessary for the production of this book. Others to whom I am grateful for their expert advice include Richard Bainbridge of the University of Cambridge, and Alwyne Wheeler, Department of Zoology, Fish Section, British Museum of Natural History, London.

For their generous help in acquiring Pacific specimens I wish to thank Stewart Yee, Environment Canada, Conservation and Protection, Environmental Protection Service, Aquatic Toxicity Laboratory; Leonard Ham, and Stella Yee. I also wish to thank Andrew Barton, Department of Archaeology, Zooarchaeology Laboratory, Simon Fraser University, for use of the fish collection for the identification of Pacific species.

To my husband Aubrey Cannon I am indebted for the inspiration, encouragement and support without which this work could not have been accomplished. I owe him also for the many suggestions, criticisms and diligent editing which helped to make this manual a polished work.
