

Excavation Summary for Extra-Housepit Excavation 25

Sara Mossop Cousins

Extra-Housepit Excavation 25 (EHPE 25) is a small, shallow depression located 16 meters to the north of HP 109 (Vol. III. Preface, **Fig. 1**). It was tested in 1998. Several flakes were recovered but there was no indication that this depression was a feature. The stratum did not change and sterile till was encountered without finding any clues pertaining to the formation of the depression. It appears not to have been cultural.
